

Functions

Python Basics 2

Dr. Ryan Krauss

Grand Valley State University

Functions in Python

- ▶ multiple functions can be defined in any python module/script

Functions in Python

- ▶ multiple functions can be defined in any python module/script
 - ▶ do not need to be in a separate file

Functions in Python

- ▶ multiple functions can be defined in any python module/script
 - ▶ do not need to be in a separate file
- ▶ functions can have multiple outputs

Functions in Python

- ▶ multiple functions can be defined in any python module/script
 - ▶ do not need to be in a separate file
- ▶ functions can have multiple outputs
- ▶ optional arguments and default values are very clean and easy

Defining Functions

Code for the function:

```
def myfunc (A, B) :  
    C = A + B  
    D = A * B  
    return C, D
```

Defining Functions

Code for the function:

```
def myfunc (A, B) :  
    C = A + B  
    D = A * B  
    return C, D
```

Using the function:

```
x, y = myfunc (4, 5)
```

- ▶ Note: functions can be placed directly in a Python file or imported from other modules.
