Triangular boards

For size m triangular board T_m ,

$$r_k(T_m) = S(m+1, m+1-k)$$

where S(m, n) are the Stirling numbers of the second kind, i.e.

$$S(m, n) = S(m - 1, n - 1) + nS(m - 1, n)$$

with S(m, m) = 1 and S(m, 1) = 1.

Triangular Boards in Three Dimensions

Theorem (Krzywonos, A.)

For size m triangle board Δ_m in three dimensions,

$$r_k(\Delta_m) = T(m+1, m+1-k)$$

where T(m, n) are the central factorial numbers, *i.e.*

$$T(m, n) = T(m - 1, n - 1) + n^2 T(m - 1, n)$$

with T(m, m) = 1 and T(m, 1) = 1.

Genocchi Boards in Three Dimensions

Theorem (Krzywonos, A.)

For a size *m* Genocchi board Γ_m in three dimensions, $r_m(\Gamma_m)$ is given by the (m + 1)th (unsigned even) Genocchi number $G_{2(m+1)}$ (1, 3, 17, 155, 2073, ...)

The generating function for the Genocchi numbers G_n is

$$\frac{2t}{e^t+1} = \sum_{n=1}^{\infty} G_n \frac{t^n}{n!}$$

3

< ロ > < 同 > < 三 > < 三

The generating function for the Genocchi numbers G_n is

$$\frac{2t}{e^t+1} = \sum_{n=1}^{\infty} G_n \frac{t^n}{n!}$$

 $G_{odd} = 0$

3

The generating function for the Genocchi numbers G_n is

$$\frac{2t}{e^t+1} = \sum_{n=1}^{\infty} G_n \frac{t^n}{n!}$$

 $G_{odd} = 0$ and G_{2n} count

 Permutations a₁a₂...a_{2n-2} such that even a_i is followed by a smaller number and odd a_i is followed by a larger

A (10) A (10)

The generating function for the Genocchi numbers G_n is

$$\frac{2t}{e^t+1} = \sum_{n=1}^{\infty} G_n \frac{t^n}{n!}$$

 $G_{odd} = 0$ and G_{2n} count

- Permutations a₁a₂...a_{2n-2} such that even a_i is followed by a smaller number and odd a_i is followed by a larger
- Permutations $a_1a_2 \dots a_{2n-2}$ such that $a_{2i} < 2i$ and $a_{2i-1} \ge 2i 1$

The generating function for the Genocchi numbers G_n is

$$\frac{2t}{e^t+1} = \sum_{n=1}^{\infty} G_n \frac{t^n}{n!}$$

 $G_{odd} = 0$ and G_{2n} count

- Permutations a₁a₂...a_{2n-2} such that even a_i is followed by a smaller number and odd a_i is followed by a larger
- Permutations $a_1a_2...a_{2n-2}$ such that $a_{2i} < 2i$ and $a_{2i-1} \ge 2i-1$
- Permutations $a_1a_2...a_{2n-2}$ such that $a_i > a_{i+1}$ means both a_i and a_{i+1} are even

E Sac

The generating function for the Genocchi numbers G_n is

$$\frac{2t}{e^t+1} = \sum_{n=1}^{\infty} G_n \frac{t^n}{n!}$$

 $G_{odd} = 0$ and G_{2n} count

- Permutations a₁a₂...a_{2n-2} such that even a_i is followed by a smaller number and odd a_i is followed by a larger
- Permutations $a_1a_2...a_{2n-2}$ such that $a_{2i} < 2i$ and $a_{2i-1} \ge 2i-1$
- Permutations $a_1a_2...a_{2n-2}$ such that $a_i > a_{i+1}$ means both a_i and a_{i+1} are even
- Permutations a₁a₂...a_{2n-2} such that a_i < i means both a_i and i are even

First permutation: 1st coordinates of the rooks from top to bottom Second permutation: 2nd coordinates of the rooks from top to bottom

First permutation: 1st coordinates of the rooks from top to bottom Second permutation: 2nd coordinates of the rooks from top to bottom Pairs of permutations of 5 π_1, π_2 such that $\pi_1(i)$ or $\pi_2(i) \le i$ for each *i*.

Permutation tuples

More generally: The generalized Genocchi numbers count the number of permutation tuples such that at least one $\pi(i) \leq i$.
